Projects

Parkinson's Detection GP

11/2021 - 06/2022

- Parkinson's detection website that helps the patient to detect if they might have Parkinson's or not using CNN deep learning..
- The user must draw a spiral on paper, take a picture for that paper, and upload it and the model will detect if it's Parkinson's or not.
- .fully responsive Modern Full Stack website.
- Front-End Utilized:React.JS, TailwindCSS for front-end...
- Backend Utilized: Flask for server, firebase for storing images for later training, and Heroku for Hosting..
- This is my Graduation project, I Did the Front-End, The Backend and did 2 deep learning models while searching for the best model that can get high accuracy.
- Demo:<https://gpathaa.vercel.app/>

E-commerce

06/2022 - 06/2022

- On the E-commerce website, users can see products, select products, buy products, and pay using a stripe payment gateway.
- It has CMS Dashboard for the owner to Add products, see customers, see payments and customize the website..
- A fully responsive Modern Full Stack Ecomm
- application with Payments functionality built with NextJS and sanity.
- Utilized:Next.JS, TailwindCSS, sanity and Stripe, AWS Amplify.
- Demo:<https://new-ecommerce-eight.vercel.app/>
- Code:https://github.com/ahmed3520/new_ecommerce

Gym-Exercise

06/2022 - 06/2022

- A gym website where the user can search for exercise.. see how to practice them..
- It has pagination, filtering, and search..
- .fully responsive Modern Full Stack Ecommerce application with Search, and pagination using RestApi built with NextJS..
- Utilized:Next.JS, TailwindCSS, API.
- Demo:<https://gym-sand.vercel.app/>
- Code:<https://github.com/ahmed3520/gym>
